What is Access Road?
The access road allows you to access your works, e.g. a dam or reservoir.

What is Back flood control structure?
A structure to control water held back or forced back.

What is Balancing Reservoir?
A reservoir for the purpose of reducing discharge fluctuations due to peak-load operation.

What is Control Gate?
A gate which controls the flow of water.

What is Culvert?
A drain or pipe that allows water to flow under a road, railroad, trail, or similar obstruction.

What is Dam?
A dam is any barrier that impounds water.

What is Deep intake?
An intake located deep in the water.

What is Distribution system?
A system which allows you to distribute water to multiple locations.

What is Ditch?
A small or moderate depression created to channel water.

What is Diversion channel?
A channel used to divert (redirect) water from one spot to another.

What is Diversion structure?
A structure that allows you to divert (redirect) water from one spot to another.

What is Dugout?
An excavation in the ground that holds water.

What is Dyke?
A dyke (also spelled *dike*) is a long, thick embankment or wall constructed to prevent flooding, particularly from the sea or a river.

What is Erosion Protection?
A material (i.e. riprap) that is used to prevent erosion of the stream bank and bed.

What is Fire Suppression System?
A system used to suppress fire.

What is Fish ladder?
A structure on or around an artificial barrier (e.g. a dam) that allows fish to migrate.

What is Flow measuring device?
A device that measures the flow of the water.

What is Hatchery?
A facility where eggs are hatched under artificial conditions.

What is Head Pond?
A reservoir designed to maintain required hydrostatic head.

What is Heat exchanger?
A device used to transfer heat from a fluid on one side of a barrier to a fluid on the other side.

What is Hydrant?
An outlet from a water main consisting of an upright pipe with a valve from which fluid can be tapped.

What is Infiltration chamber/gallery?
A low gradient conduit dug into an aquifer that collects groundwater by gravity flow.

What is Intake?
Where you extract or divert water from the source.

What is Irrigation System?
A system to provide artificial application of water to land for watering purposes.

What is Meter?
A device used to measure how much water is used.

What is Outlet?
An opening through which water flows out or is extracted from a reservoir or stream.

What is Penstock?
A sluice, gate, or enclosed pipe that controls or delivers water flow.

What is Pipe?
A hollow cylinder used to convey water.

What is Pond?
A body of standing water, natural or man-made, usually smaller than a lake.

What is Powerhouse?
A structure that usually contains a generator to generate electrical power.

What is Pressure tank?
A closed cylindrical container designed to store water under pressure.

What is Pump?
A device that moves fluids by mechanical action.

What is Pumphouse?
A structure that houses a pump.

What is Reservoir?
An artificial lake or impoundment used to store water.

What is Screened Intake?
An intake covered by a screen to prevent fish and wildlife from being drawn in.

What is Settling pond?
A basin used to treat turbidity in water by allowing suspended material to settle.

What is Spillway?
A structure used to release water from a dam into a downstream area.

What is Sprinklers?
Irrigation from above by freely falling drops of water.

What is Standpipe?
A freestanding pipe with a tap used to dispense water where there is no direct supply.

What is Sump?
A low space that collects liquids such as water or chemicals.

What is Switch Yard?
A switching station that connects and disconnects electrical lines.

What is Tailrace?
A channel that conveys water away from a turbine or water-wheel.

What is Tank?
A container holding liquid.

What is Transmission Line?
A cable designed to carry electricity.

What is Treatment facility/system?
A facility or system used to make water suitable for its application.

What is Trough?
A receptacle used to provide drinking water to animals.

What is Tunnel?
An underground passageway enclosed except for entry and exit points.

What is Weir?
A barrier across a river designed to alter flow characteristics.
