FAQ: What Is the Normal Irrigation Window?

Question

What is the normal irrigation window, and when should I explain my irrigation schedule?

Answer

If your selected irrigation months fall **outside the normal irrigation window for your region**, provide an explanation in the **Additional Information** field in the **Add Purpose** screen or popup.

Region	Normal Irrigation Window
West Coast	April 1 – September 30
South Coast	April 1 – September 30
Thompson Okanagan	April 1 – September 15
Kootenay Boundary	April 1 – September 30

If you plan to irrigate outside these periods, explain why the extended irrigation season is necessary. Providing this rationale helps reviewers assess your application.

Important

If your irrigation schedule falls within the normal irrigation window for your region, no additional explanation is typically required. If it falls outside the normal irrigation window, provide a clear explanation in the **Additional Information** field in the **Add Purpose** screen or popup.
